

Desktop Cyber Emulator Version 2.0

Changes since version 1.0

- Deadstart COS, SMM, KRONOS and various versions of NOS from a single binary.
- Explicit device name support for DD884. Now you can have a set of KRONOS disks and a set of NOS 1.3 disks, which won't interfere with each other.
- All SMM diagnostics in NOS 1.3 maintenance mode run and find no errors.
- Deadstart Diagnostic Sequencer in NOS 1.3 successfully runs all tests.
- Support for basic Status & Control register.
- CMU, ECS, ECS flag register and Interlock register.
- CPU bug fixes including floating point.
- Improved most peripheral drivers.
- Operator interface via ALT-O on the console.
- Support for CDC 512 printer.
- Support for terminal multiplexer (6671/6).
- Support for data channel converter (6681).
- Support of UNIX and X11.
