Your Tandy CDR-1100 CD-ROM Drive uses the latest technology for information
storage and retrieval. A single CD (compact disc) can hold up to 550
megabytes of computer data - that's more than the contents of 100 textbooks
or a complete set of encyclopedias, including the pictures!

After you install the hardware and software as described in the manual, you
can access the information on CD-ROMs the same way you access data on a
hard drive or a diskette. The only thing you can't do is save information
onto CDs. Remember that ROM stands for read only memory.

You can install the CDR-1100 in PC/XT/AT-compatible computers that have an
unused 5 1/4" drive bay.

Your computer must also have MS-DOS Version 3.30.00 or later.

NOTES:

° If you are not familiar with computer hardware installation, we suggest
  you let your local Radio Shack store personnel have the drive installed
  for you.

° After you install the drive hardware, you must install the CD-ROM
  software. The CDR-1100 software has a simple-to-use setup program that
  guides you through every step of its installation.
