

The first time you run Windows with Multimedia Extensions on your MPC, two tutorials run automatically. The first explains how to use a mouse. The second shows how to attach peripheral devices to the audio adapter.

Running the Tutorials:

1. Start Windows from the C> command prompt by typing win and pressing <ENTER>.
2. Respond to the screen prompts as you are guided through the tutorials, ending with the Multimedia Main Menu starting page.
3. Use your mouse to highlight the Tandy Demos page. When the Tandy Demos page appears, click on the Media Museum page and tour the world of multimedia.

If you would like to run the tutorials again, follow these steps from the Multimedia Main Menu starting page:

1. Click on the Applications page.
2. When the Applications page appears, click on the right arrow on the icon bar at the bottom of the page. Two more applications are displayed.
3. Click on Reset Tandy Demo Startup. The Tandy Demo Config box is displayed.
4. Answer yes to have the tutorials run the next time you start the computer, or click on the Tandy Demos from the Main Menu and run the tutorials immediately.
