

This appendix contains information about the audio adapter installed in the bottom expansion slot of your computer.

The audio adapter has the following features:

- software-programmable digital/analog mixer - allows simultaneous playing of .WAV files, MIDI files, and audio tracks
- stereo-digitized voice channel with stereo 8-bit DAC- lets you use FM synthesis to create interesting instrumental and percussion sounds
- FM music voices: 8 selectable waveforms, up to 15 melodies, and 5 percussion sounds
- programmable sampling rate
- 8-bit stereo analog/digital conversion of sound signal - enables more efficient use of hard drive space than 16-bit conversion
- CDR-1100 CD-ROM drive interface, joystick port, and MIDI interface - allows easy connection of the CD-ROM drive, a joystick and/or MIDI device
- microphone jack and amplifier with Automatic Gain Control (AGC) - enables you to connect and use an optional microphone with less distortion of voice input
- stereo power amplifier - provides for localized sound with portable speakers
- master volume control - lets you control the volume of all audio output from a single location
- direct and DMA DAC transfer modes - enables easy processing of audio files
- software-selectable sound input - lets you use software to choose microphone input (mono), line input (mono or stereo), and CD audio input (mono or stereo)
